

## Funding Plan

Funding Source	Receiving Institution / Principal Investigator	Purpose	TOTAL Funding Amount	Timeframe	Confirmed or anticipated?
BBSRC	NHM (Vogler), RBGE (Hollingsworth), RBG Kew (Forrest)	To enhance the DNA/tissue bank infrastructure associated with UK taxonomic facilities and to barcode a substantial component of this collection. Also to enhance the sequencing capacity of NHM as a barcoding facility	£777K (FEC £970K)	2011-2016	Funding application due for submission Nov 2010
NHM	NHM	DNA barcoding of NHM samples	To cover 20K barcodes per year	2010-2015	confirmed
Moore Foundation	RBGE (Hollingsworth)	Developing the plant barcoding infrastructure for plants (matK primer development)	£100K	2010-2011	confirmed
TBC	RBGE/NHM (possibly others)	Linking existing plant silica gel collections from active taxonomic projects with the sequencing capacity of Guelph	To be decided – funds to cover 30-60K samples (technicians support, consumables). NOTE this concept is a back-up plan to the goal of establishing a UK based facility as outlined above	TBC	Awaiting outcome of BBSRC proposal outlined above to determine whether to go for this
